

ARROW

GRAIN SORGHUM

Arrow is a early maturity Grain Sorghum.
Arrow has a semi-open head type and excellent hybrid vigour.

Average Days to Flower: Spring Planting 67-70 days
Summer Planting 61-67 days

- Excellent yield potential for maturity
- Grain colour – Red
- Semi -open head type
- Grain Size – medium large
- Medium tillering habit
- Maturity – early
- Lodging resistance – medium
- Provisional midge rating – 4
- Disease resistance – good
- Tolerant to stress across most environments

Performance

Arrow displays medium lodging resistance and has an attractive red grain colour. Arrow adapts well across most environments and systems. It is suitable for both dryland and irrigated production.

Agronomy, Disease Resistance & Tolerance

Arrow has good disease resistances and a provisional midge rating of 4.

Dryland marginal	30-50,000 Plant Population
Dryland good	50-75,000 Plant Population
Irrigation	90-140,000 Plant Population
