

SW525LH™ Brand

SW525LH™ Brand is a leafhopper resistant, high yield variety with excellent pest resistance: high resistance to potato leafhopper, Phytophthora, and multi-race Aphanomyces. An excellent choice for the Midwest, Plains and Northeast where leafhoppers can be a pernicious pest on a yearly basis.

This fall dormancy 5 variety has high yield potential to rival elite conventional varieties even when leafhoppers don't exceed the economic threshold for spraying. Choose SW525LH if you aren't planning to scout for leafhoppers or if spraying for leafhopper control is not a viable option. An excellent option for organic production in the upper Midwest, Plains and Northeast.

Agronomic Traits

- DRI Score: 35
- Fall Dormancy: 5
- Yield: 8
- Winter Hardiness: Very Hardy

Key Advantages

- High yield potential to rival elite conventional varieties
- Works well for organic production
- Excellent pest resistance for most North American environments
- Highly suitable to all areas where leafhoppers can be a significant pest
- Excellent winter hardiness
- Very suitable for 3-5 high yield cuts of quality hay production
- Highly suitable to heavy soils where root rots are a concern
- SW525LH provides the best overall control of potato leafhoppers

in alfalfa, for growers who don't wish to consistently scout for leafhoppers or apply timely pesticides for control.

PEST RESISTANCE	HR	R	MR	LR
Bacterial Wilt	•			
Verticillium Wilt	•			
Fusarium Wilt	•
